Introduction to Good Clinical Laboratory Practice (GCLP)

 .

Good Clinical Laboratory Practice (GCLP) guidelines describe the application of those Good Laboratory Practice principles that are relevant to the analyses of samples from clinical trials while ensuring the purpose and objectives of the Good Clinical Practice principles are maintained. In so doing, the reliability, quality, consistency and integrity of data generated by clinical trial laboratories can be assure which is crucial to the outcome of any clinical trial. Introduction to

Good Clinical Laboratory Practice is a stand-alone short course for all those wanting to gain an understanding of GCLP and its application in laboratories. This peer reviewed course provides an introduction to GCLP, summarises the principles of GCLP and offers an overview of the implementation of GCLP within a clinical trial. It is developed by The Global Health Network and the Global Health Clinical Consortium (GHCC).
It takes between 45 – 60 minutes to complete with a certificate issued upon successful completion of the final quiz.

TRAINING MATERIALS

1000+ OBGYN
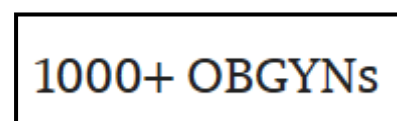

The 1000+ OBGYN Project is a consortium of Sub-Saharan African (SSA) departments

of obstetrics and gynecology (OBGYN) departments and their U.S. OBGYN department partners whose goal is to improve maternal and neonatal health in SSA through training and retaining obstetricians and gynecologists to serve their communities.

Practicing OBGYN, residents, midwives, midwife/OBGYN students and other health practitioners may benefit from this material. The materials can be used for teaching medical students, midwives and health workers, and of course OBGYN residents. Academic OBGYN departments can use these resources as references to use or adapt for their own residency curricula.

These materials are all Open Educational Resources, which means they are publicly available, free to use, and licensed to copy and distribute with no fee. These resources are freely available online through the Open.Michigan Initiative and, through a partnership with The Global Library of Women's Medicine, will be distributed offline so they can be accessed without connecting to the Internet.

The four new collections developed by this partnership cover a diverse range of subjects, including abnormal uterine bleeding, pregnancy complications, vaginal surgeries, pelvic masses, newborn care, postpartum care and family planning.

Users' Guide to Dissemination and Implementation in Health for Researchers and Practitioners

This Guide was developed by the Center for Research in Implementation Science and Prevention (CRISP) in partnership with colleagues from the Colorado Clinical and Translational Sciences Institute (CCTSI), the Kaiser Permanente Center for Health Education Dissemina-

Department of Veterans Affairs. Understanding how best to disseminate and implement evidence-based healthcare and prevention, while not implementing inappropriate or unnecessary services, is challenging.

The content is divided into five sections:
• Why D&I is important
• Definitions, theories and concepts
• Strategies and tools for designing successful D&I interventions
• Recommendations for evaluation design and measurement
• Tips for success – for researchers and practitioners

In each section you are pointed to key references and online resources to aid you in further study and application.
